

Twist clamp cylinder——ACK Series

Installation and application

- 1. Clamping operation of the cylinder must be carried out within the clamping stroke and can not be performed within the swivel stroke;
- 2. Clamping plane must be vertical to the cylinder axes. After the components are clamped, don't move the
- 3. Before the cylinder is connected to pipeline, sundries in the pipe must be cleared away to prevent sundries entering the cylinder;
- 4. The medium used by cylinder shall be filtered by the filter core of at least 40um;
- 5. Under high temperature environment, the cylinder of high-temperature resistance shall be selected. Anti-freezing measure shall be adopted under low temperature environment to prevent the water freezing in
- 6、 If the cylinder is dismantled and stored for a long time, please conduct anti-rust treatment to the surface. Anti-dust cap shall be added in inlet and outlet. The end of piston shall be coated with antirust oil.

How to mount and use

The order code is R.

How to select the fitting for body's port

If you select ACK series and the rotation angle is 90°, or ACKD series, you must use mini fitting for body's ports, Otherwise the fitting and the screw maybe touched and can't be used normaly.
